SPECIFICATIONS

The appliance comprises one baking element and an optional support. Baking takes place by passing the product between two adjustable flows of hot air, which allow perfect distribution of heat throughout the chamber, making this oven particularly suitable to bake pizza and other alimentary products. The regulation of power is automatic in basis of the load, the ceiling and floor resistors, both on the input side and the output one of the baked product, are controlled independently, and the belt speed is reverse controlled and adjustable. Stainless steel access flap hinged at bottom with tempered glass window. Efficiently insulated and isolated, the outer surfaces are further cooled by a at a very low noise flow of air. The support comprises steel legs on swivel castors. The maximum temperature in the baking chamber is 320°C (608°F).
